

ACȚIUNEA NORMEI JURIDICE ÎN TIMP

Ion FLĂMÂNZEANU*

Abstract:

A juridical relation forms itself based on the positive law, in force at the moment of its creation. The action of the juridical norms needs three necessary coordinates: space, time and persons. Regarding the moment of enforcing of juridical norm, this moment is bounded by the date of publication in the Official Monitor, or by the date stipulated within the juridical norm.

The juridical norm activates only in present and future (the time it is in force).

The fundamental principle of the action in time of the juridical norms is the principle of nonretroactivity.

In some situations, limited as number, the law could have a retroactive or ultraactive character.

Keywords: norm; action; application; time; territory.
